Your first Workspace

Keep your reference display visible while you switch tasks on another screen.

1 Launch from the Start menu

The app runs in the system tray at the bottom right. If you cannot see its icon, open the hidden-icons menu.

2 Click the tray icon

This opens the Workspace overview and search box. New profiles can also use Ctrl+Shift+Space. Updates preserve saved shortcuts.

3 Point at the screen you want to switch

The defaults are Ctrl+Win+Down for next and Ctrl+Win+Up for previous. Check the overview footer for your active shortcuts.

Find an open window

Type a window title or app name in the overview search box. Results show the Windows desktop, monitor and Workspace. Select an available result and press Enter. While converting Japanese text, the first Enter confirms the text.

Switch two or more displays together

Choose Link screens (Alt+L) at the top right. Settings stay in the same window. Select at least two screens and Apply; others stay independent. Back to overview or Esc discards edits.

Pin, shortcuts and Exit

Ctrl+Alt+P pins the active window by default. Use Shortcuts (Alt+S) at the top right to change keys. Updates keep saved keys. To quit, use Exit in the tray menu.
